

# LONG TERM LARGE SCALE (LTLS): INTEGRATED MODEL

Vicky Bell, Pam Naden, Helen Davies

+ LTLS modelling team (Ed Tipping, Shibu Muhammed, Jess Davies, Ulli Dragosits, John Quinton, Marianne Stewart, Andy Whitmore, Ed Carnell, Sam Tomlinson, Lei Wang, Lianhai Wu, Rachel Helliwell)

# LTLS: Integrated Model (IM)

Hydrological model behind IM incorporates basic properties of:

- soil
- land cover
- topography

*LTLS output can be daily/monthly/... And compared to obs. from HMS*

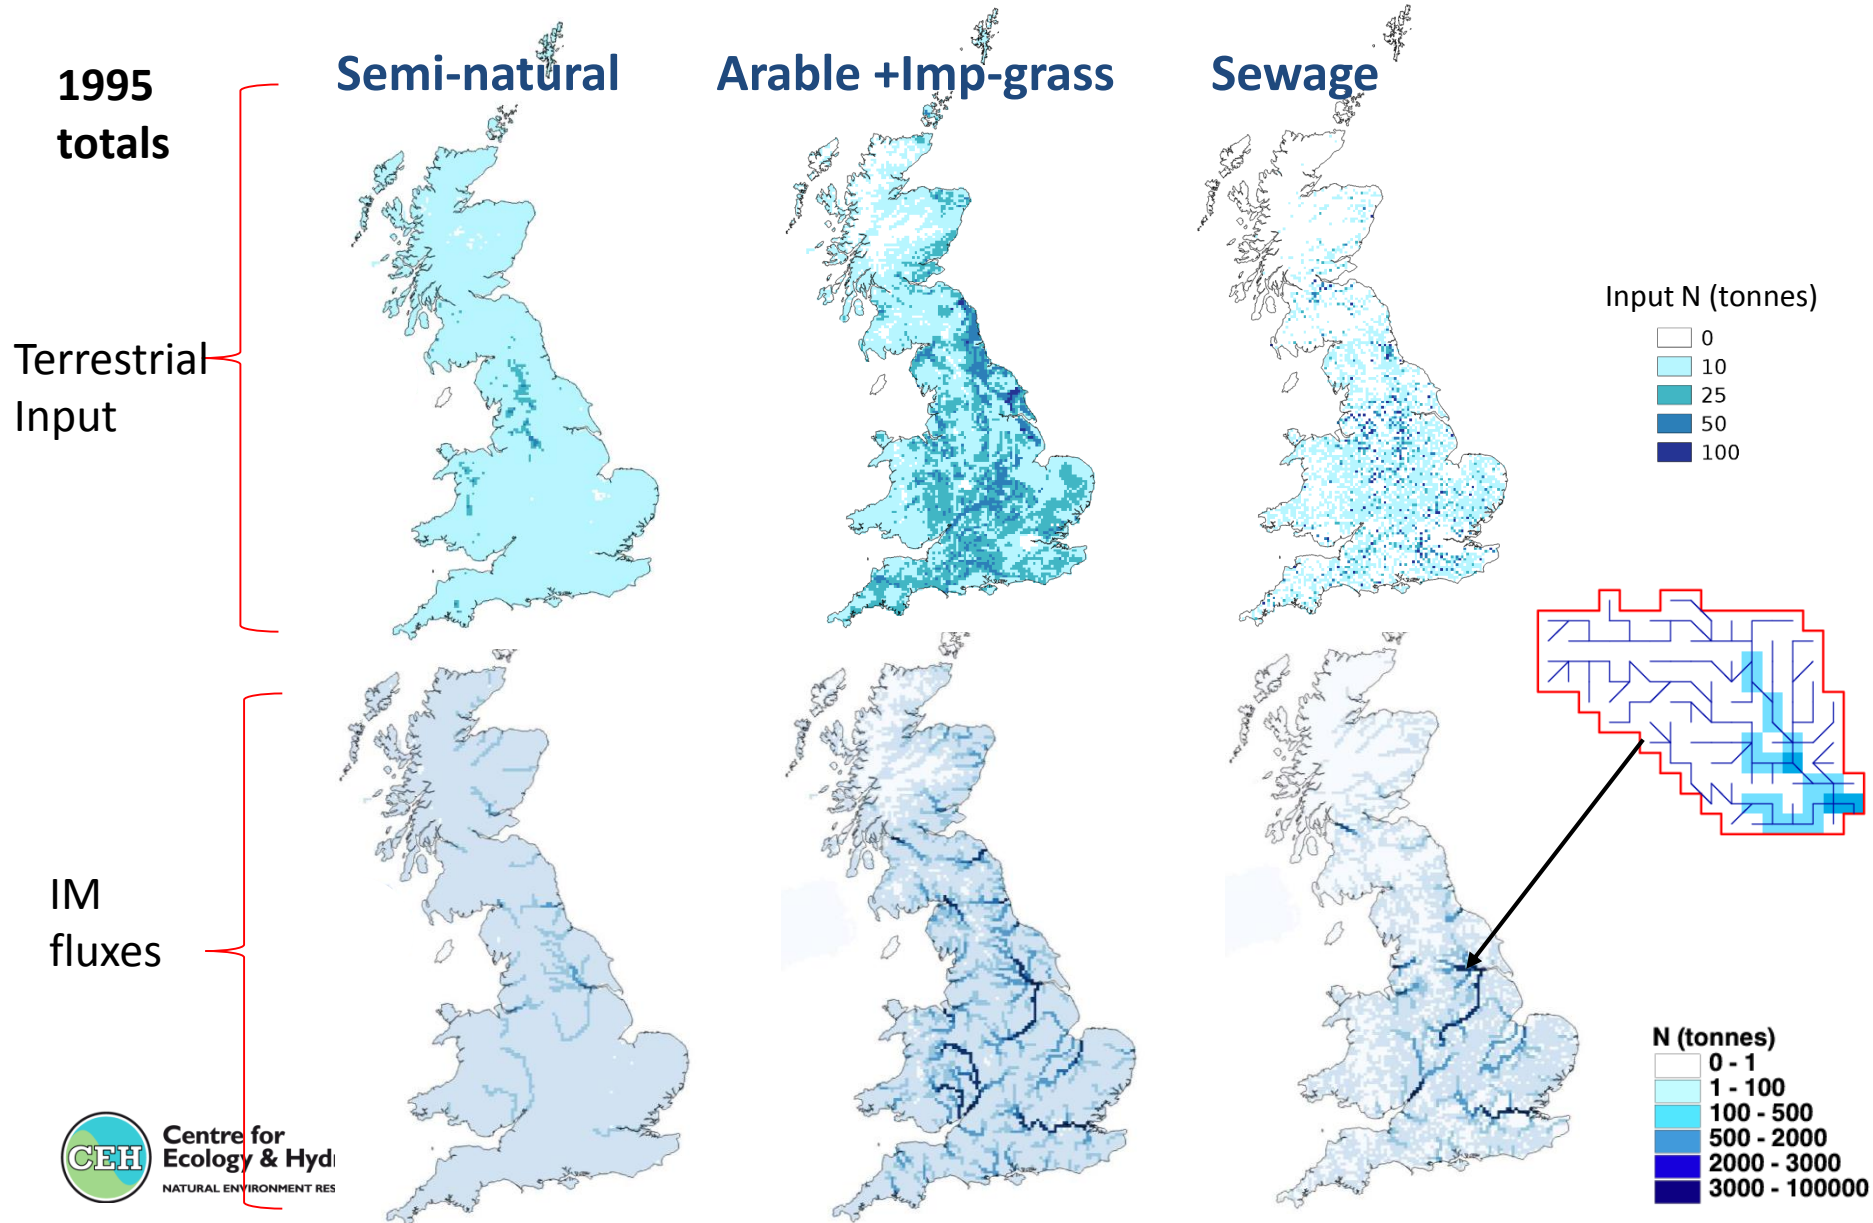

# LTLS: River variables modelled

## List of variables

WATER PHASE			PARTICULATE PHASE			OTHER RIVERINE VARIABLES		
LTLS no.	LTLS name	Units	LTLS no.	LTLS name	Units	LTLS no.	LTLS name	Units
1	DIC	g C	1	FS	g	1	pH	pH
2	DOC	g C	2	POCL	g C	2	O <sub>2</sub>	mg/L
3	DO <sup>14</sup> C	%	3	POCNL	g C	3	algae	
4	NH <sub>4</sub> -N	g NH <sub>4</sub> -N	4	PO <sup>14</sup> CL	%	<del>4</del>	<del>macrophytes</del>	
5	NO <sub>3</sub> -N	g NO <sub>3</sub> -N	5	PO <sup>14</sup> CNL	%	5	water temperature	°C
6	DON	g N	6	PONL	g N			
7	TDP	g P	7	PONNL	g N	<b>GASEOUS OUTPUTS FROM RIVER MODEL</b>		
8	Ca <sup>2+</sup>	g Ca	8	NH <sub>4</sub> -NADS	g NH <sub>4</sub> -N	1	CO <sub>2</sub> (degassing)	g
9	SO <sub>4</sub> -S	g SO <sub>4</sub> -S	9	POPL	g P	2	CO <sub>2</sub> (decomposition DOC)	g
10	Si	g Si	10	POPNL	g P	3	CO <sub>2</sub> (decomposition POCL)	g
			11	PADS	g P	4	N (denitrification)	g
			12	PIP	g P			

flux accounting through the river system

# Sources of Nitrate: terrestrial inputs and fluxes (tonnes)

# LTLS: integrated model

Exploring change in UK riverine nutrients over long periods...

## Historical-current simulations: 1800 - 2010

- Driven by climate model hindcasts (1800 – 1970) and observed (1971-2010)
- Historical changes in land-cover, sewage, agriculture (see next slide)

## Exploring future scenarios using the model: 1971 - 2100

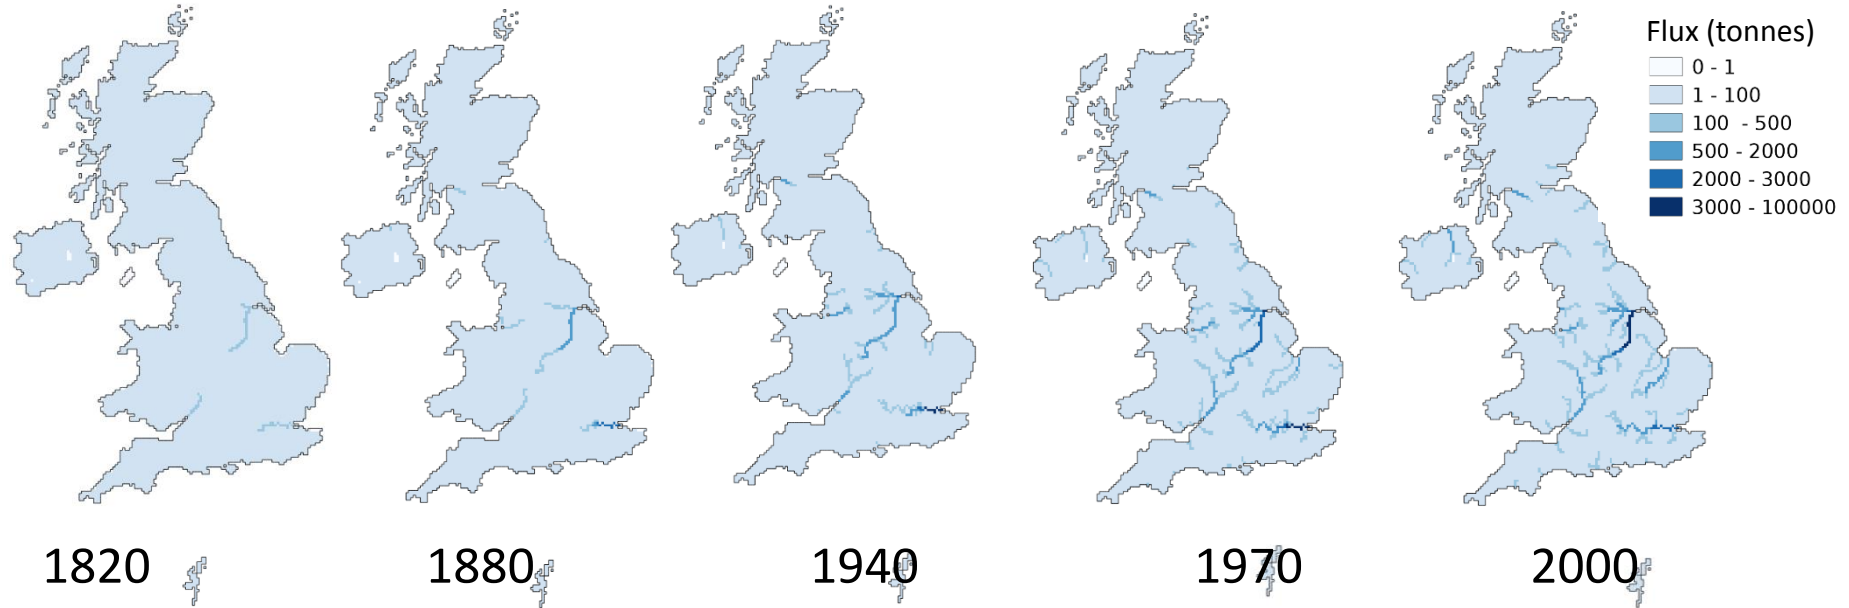

- Uses future climate model estimates
- Sewage treatment scenarios (P-stripping)
- Large scale** land-use change (to semi-natural and agricultural land)
- Changing atmospheric pollution/deposition

# A pictorial history of change implemented in the IM

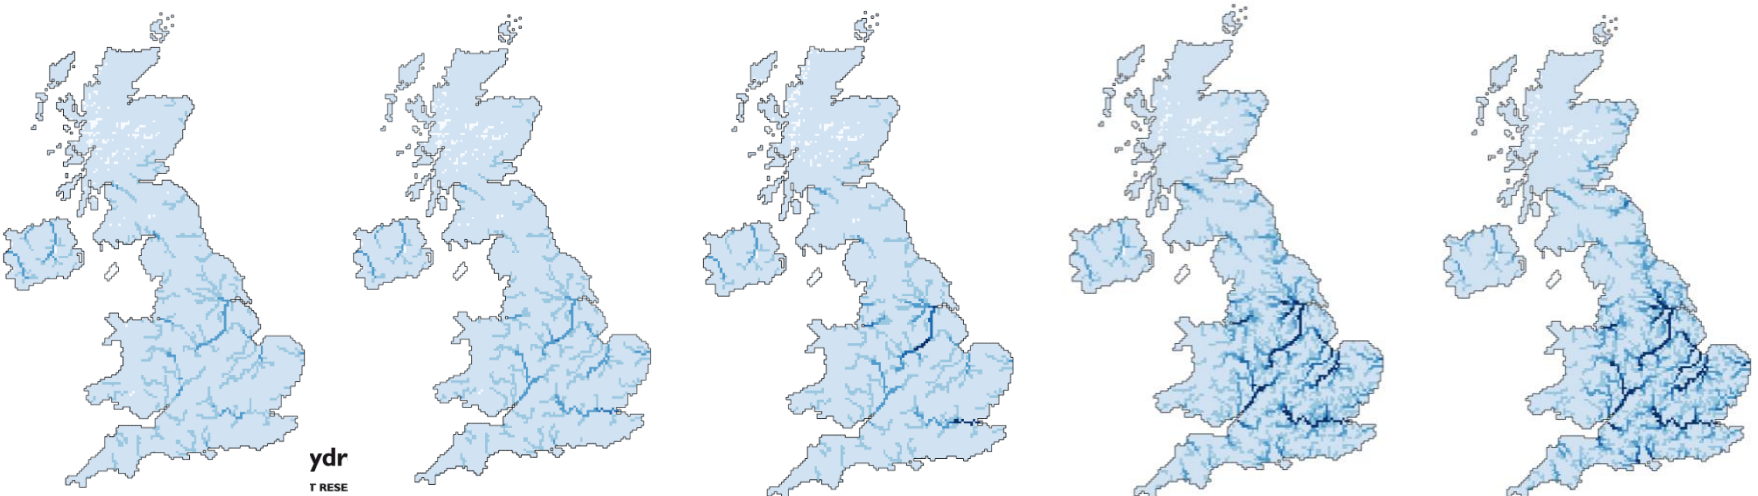

# Historical-current LTLS IM run (1800-2010)

## Change in River **Phosphorus (TDP)** fluxes across the UK (tonnes)

## Change in River **Nitrate** fluxes across the UK (tonnes)

# Historical-current LTLS IM run (1800-2010)

HMS 1008 RIBBLE at SAMLESBURY

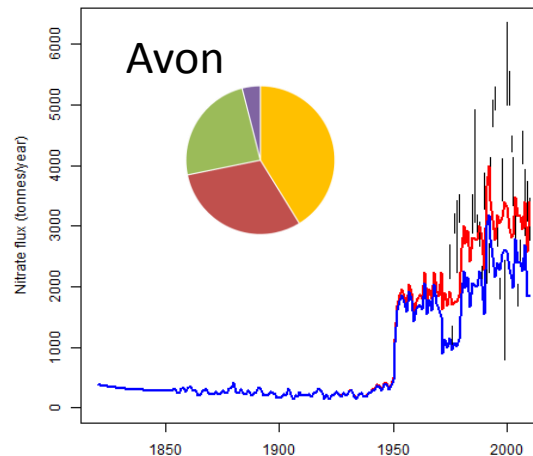

HMS 6010 THAMES at TEDDINGTON WEIR

River **nitrate** fluxes  
for selected  
catchments

IM **red** line  
IM no sewage **blue** line  
HMS 95% CI in **grey**

HMS 8100 AVON at KNAPP MILL PIPE BRIDGE

HMS 12007 DEE at MARYCULTER BRIDGE

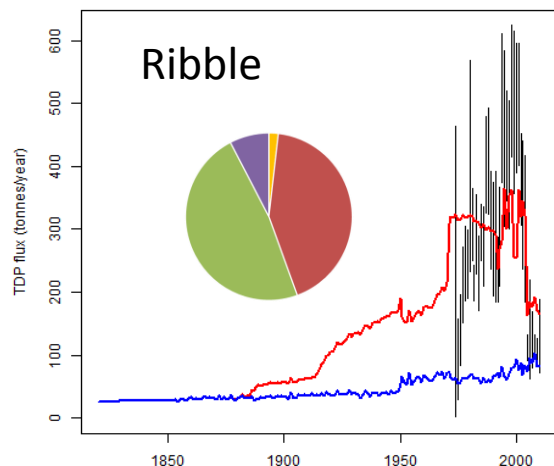

Catchment % land-cover:

- Arable
- Improved grass
- Semi-natural
- Urban

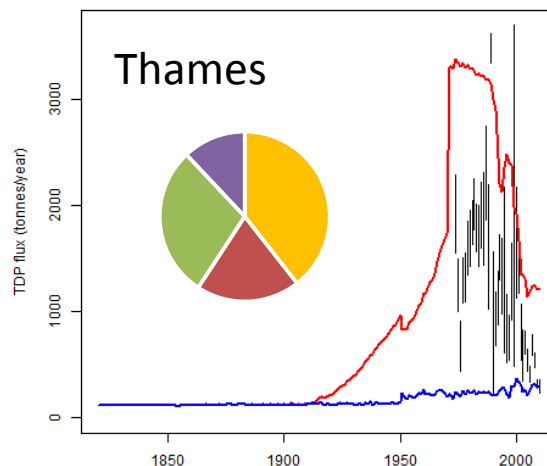

# Historical-current LTLS IM run (1800-2010)

HMS 1008 RIBBLE at SAMLESBURY

River **phosphorus** fluxes for selected catchments

IM **red** line  
IM no sewage **blue** line  
HMS 95% CI in **grey**

HMS 8100 AVON at KNAPP MILL PIPE BRIDGE

HMS 12007 DEE at MARYCULTER BRIDGE

Catchment % land-cover:

Arable

Improved grass

Semi-natural

Urban

# Future Scenarios (2010 – 2100)

*With selected Future scenarios highlighted in red:*

## Climate model estimates:

- WATCH ECHAM5 climate model A2 (medium high emissions) scenario

## Sewage:

- P1: P-stripping as in 2010 applied to 2010 -2100
- P2: P-stripping applied to all WWTW 2010 -2100

## Semi-natural scenarios

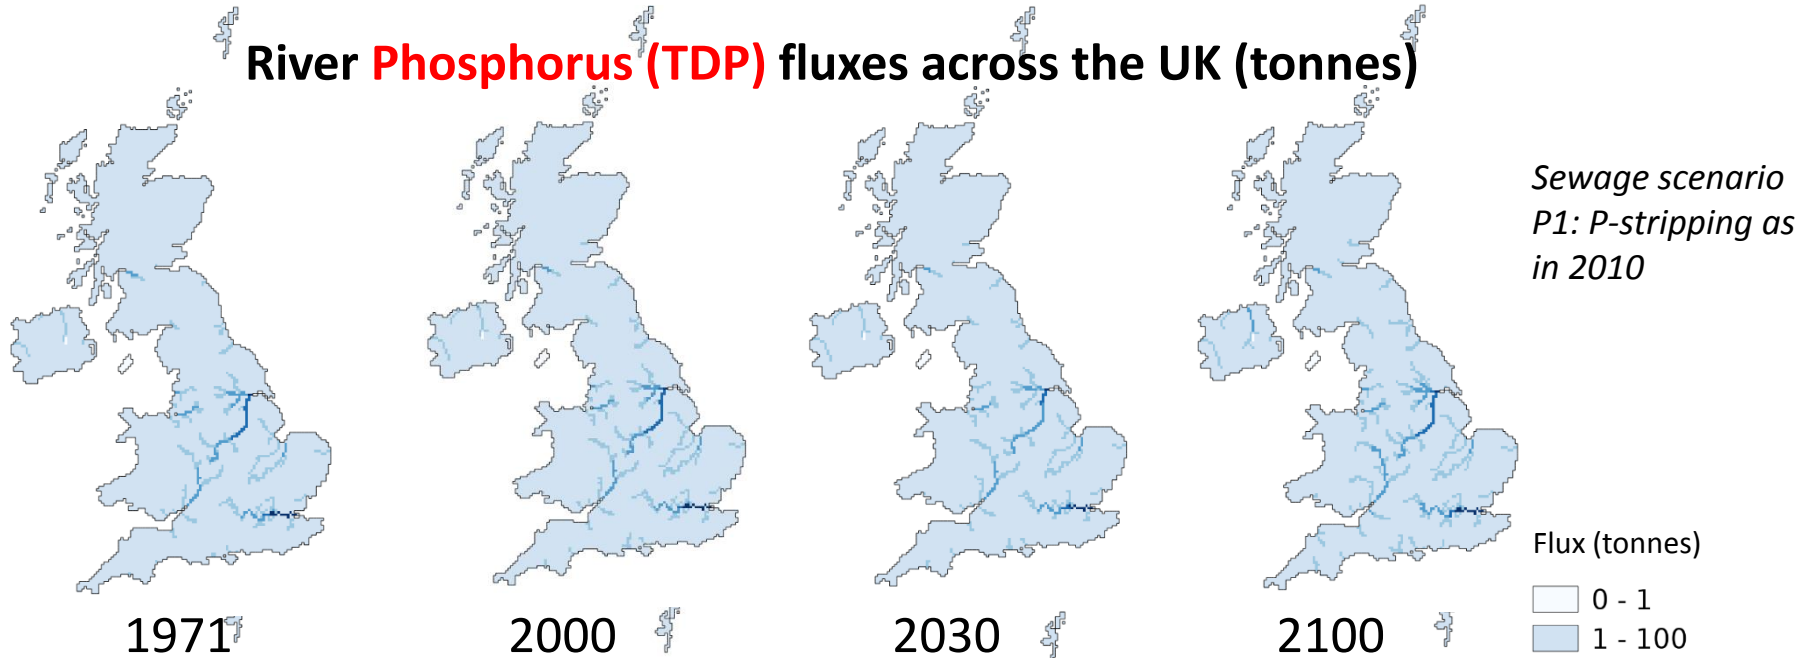

- N1: climate change + 2010 atmospheric deposition applied to 2010-2100
- N2: climate change + atmospheric deposition scenario applied to 2010-2100
- N3: climate change + atmospheric deposition scenario 2010-2100 + woodland expansion

## Agricultural scenarios

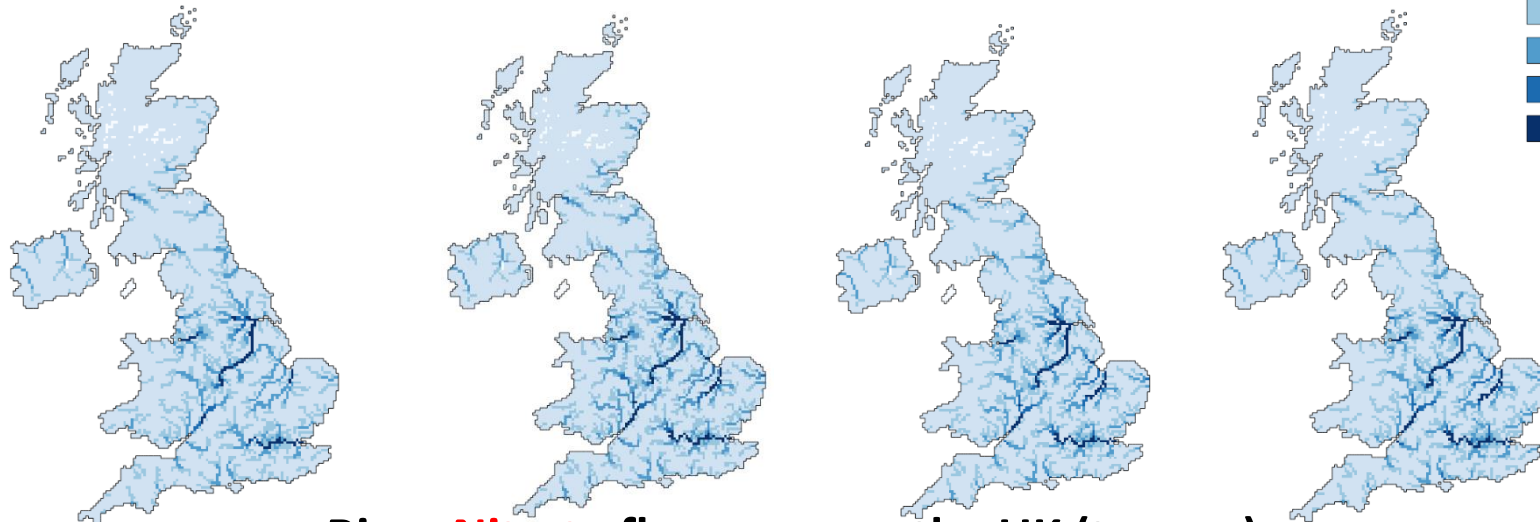

- Arable RA1: climate change + atmospheric deposition scenario + increased yield
- Arable RA2: climate change + atmospheric deposition scenario + increased yield through NUE
- Grass RG1: climate change + atmospheric deposition scenario + intensive grass with BAU stocking density
- Grass RG2: climate change + atmospheric deposition + intensive grass with increased stocking density

# IM-F3 Scenario LTLS IM run (1971-2100)

## River Phosphorus (TDP) fluxes across the UK (tonnes)

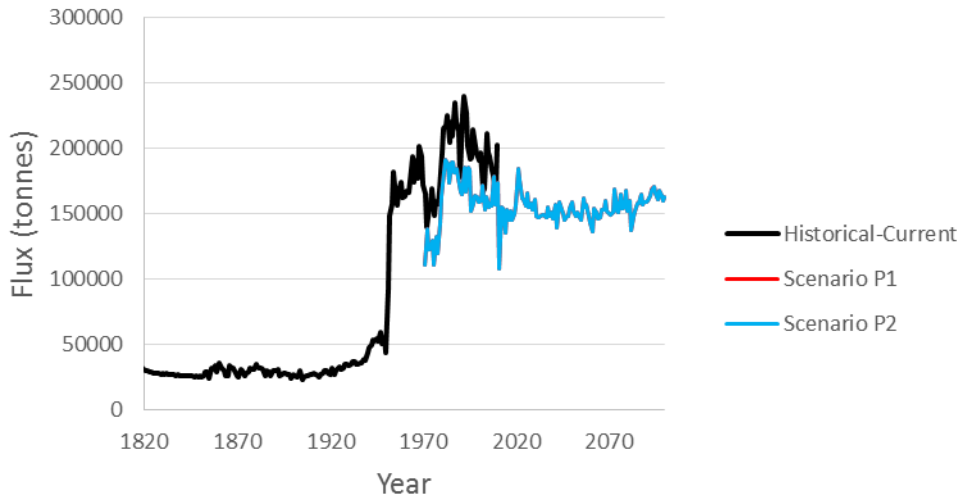

## River Nitrate fluxes across the UK (tonnes)

# UK Fluxes into the sea: Historical-current (1800-2010), Future (1971-2100)
