

Domashevsky S.V. Distribution, abundance and migration of Short-toed snake Eagle in the Kiev region. – Reserve management and studies in Ukraine. – 2005. – Vol. 11 (1). - P.45-49.

Short-toed snake Eagle (*Circaetus gallicus*) in Ukraine is a nesting migratory bird, listed in the Red Book. The material was collected from 1992 to 2004 years. Territorial birds were recorded in nesting and hunting sites in the late spring and summer period. Survey and literature data were also used. The dynamics of the number of snake-eagle on spring migration in 1992-2004 was determined. Spring migration takes place in a short time, the peak of migration occurs in the first decade of April. A total of 20 Short-toed snake Eagle were observed.
