

Dombrovski V.Ch. Observation of a rare type of aerial courtship display of White-tailed Eagle (*Haliaeetus albicilla*) in the Palesia radio-ecological State Reserve // Subbuteo – 1999.- Vol.2.(1) – P. 45-46.

On 24.04.1998 an aerial courtship display of White-tailed Eagles, including such rare elements as Talon-grasping and Mutual-cartwheeling, was observed during a raptor census in the Reserve. Unusually, three birds were present during the display, probably two males and a female.
