

Gaschak S.P. Avifauna of Industrial Area of the Chernobyl Nuclear Power Station and the Construction "Shelter" // Vestnik Zoologii, 1999. Vol 33(4-5). – P. 118.

A survey of the industrial sites of the Chernobyl Nuclear Power Plant and the Shelter object was carried out in order to determine the composition of vertebrate animals. It has been established that birds are the most numerous and diverse representatives of the fauna of vertebrate animals. A total of 15 species of birds were found.
