

V.V. Yurko New bird species of the Polesye State Radiation Ecological Reserve (Belarus) and their status. // Berkut. _2019- 28 (1-2). -P.1-5.

The Reserve is located on the territory of the Chernobyl exclusion and resettlement zone in SE of Belarus (Hemel region). 17 new species of birds were registered here in 2008–2019. Majority of them were transit migrants. Red-breasted Flycatcher probably nested, Dunnock probably sometimes nested. Black-winged Stilt previously had the status of migrant, we registered its breeding. Ornithofauna of the Reserve numbers after this addition 232 species.
