

Yurko V.V. Rare species of birds Belarus in PSRER // Ecosystems and radiation: aspects of existence and development. Coll. scientific paper. dedicated to the 25th anniversary of the Polesky State Radiation Ecological Reserve / Under the total. ed. Yu.I. Bondar. Minsk: BORBITS RNIUP "Institute of Radiology", 2013. -P. 332-355.

The studies conducted on the territory of the PSRER made it possible to determine the species composition of rare birds in Belarus, establish their status and the number of local populations, and trace the phenology of arrival and nesting. Information received over the past five years on 43 bird species previously recorded, as well as on 8 species first discovered on the territory of the PSRER is presented.
