

Phytodiversity of Ukrainian Polissia and its conservation/ Ed. T.L. Andrienko. - Kyiv; Phytosociocentre, 2006. - 316 p.

Modern data on vegetation (territorial distribution, syntaxonomical composition according to the dominant and floristic classification) and flora of the Ukrainian Polissia are presented. Considerable attention is given to rare species, rare plant communities and phytodiversity of protected area. The present-day network of these areas is characterized. Phytodiversity of nature zapovidnyks (strict nature reserves), national nature parks and other protected areas is shown (including 5 perspective national nature parks). Comparative analysis of flora of nature zapoviedniks and national nature parks of the region is carried out. The scheme of ecological network of the Ukrainian Polissia elaborated by the authors is given. Transboundary protected areas are characterised.
