

Voronetsky N. N., Tyshkevich V.E. Hoofed animals (zubr, boar, roe deer, red deer, elk) and predators (wolf, lynx, fox) in Polesky Radiation Ecological Reserve // In the collection: 10 years of the Polesky State Radiation-Ecological Reserve. Comp. by. Odintsova T.M., Kireenko K.M. - Minsk: Publishing House of N.B. Kireev, 1998. — P. 151—159.

The determination of the density and number of animals was conducted. The distribution features them in the natural (group of forest types) and residential (abandoned agrocenoses) biotope and factors that determine them were clarified. The study of predators feeding carried out.
