

Voronetsky N. N., Lunin V. F, Odintsova, T. M. Wolf in Polesky Radiation Ecological Reserve//In the collection: 10 years of the Polesky State Radiation-Ecological Reserve. Comp. by. Odintsova T.M., Kireenko K.M. - Minsk: Publishing House of N.B. Kireev, 1998. — P. 142—150.

The evaluation state of the wolf population in the reserve was carried out in 1988-1998 years. 10-12 wolf packs with a total number of 100-120 individuals were found in the surveyed area. It was noticed that the observed activity of predators falls on the morning and evening dawns, although wolves are active in the study area almost during the day. The daily ration of a wolf has been identified, which depends on the predominance of one or another species of wild ungulates.
