

Novitsky R. V. On the dynamics of the accumulation of radionuclides in amphibians and reptiles in the Polesky Radiation and Ecological Reserve // 10 years of the Polesky Radiation and Ecological Reserve / Ed. V.I. Parfenova. - Minsk: Publishing House of N. B. Kireev, 1998. - P. 120–122.

During 1997 year amphibians and reptiles were captured in the Polesky Radiation and Ecological Reserve. 8 species of amphibians and reptiles were caught. For eleven years of research, there are general trends toward a decrease in the accumulation of gamma emitters in 18.8-42.6 times in amphibians and 2.8-52.5 times in reptiles.
