

MATTHEW ASCOTT, DAN LAPWORTH, LEI WANG, MARCO BIANCHI, BEN MARCHANT

# Nitrate in groundwater

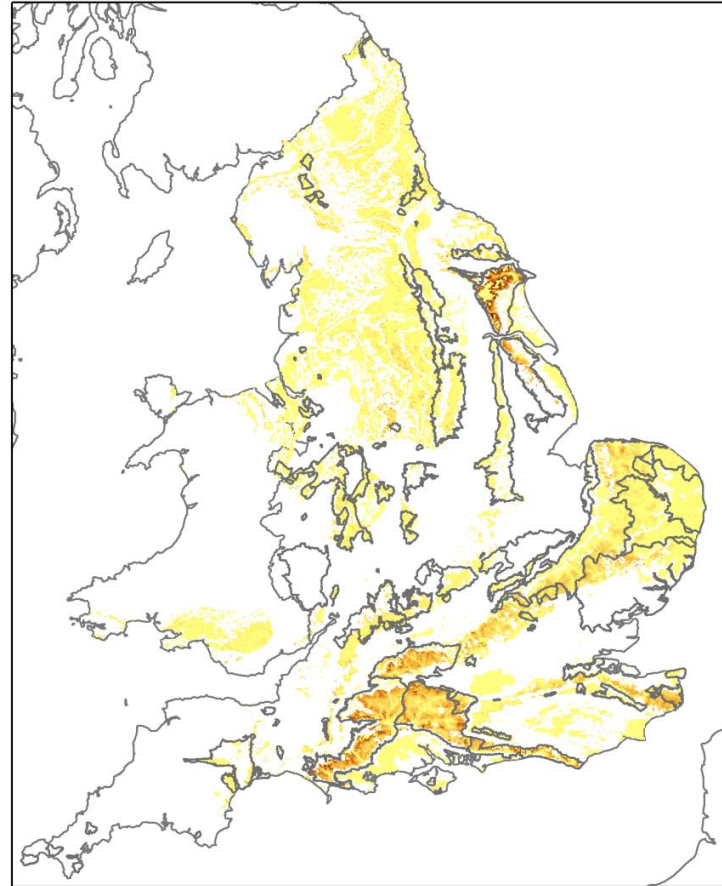

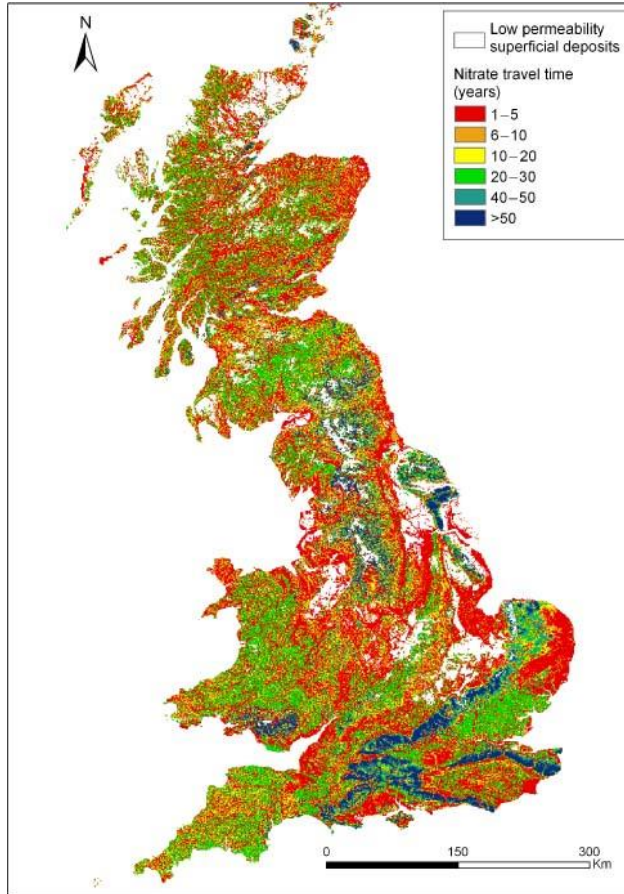

# Contents

- Background
- Recent completed BGS work on nitrate in groundwater in the UK
  - How has nitrate in groundwater been affected by climate variability and change?
  - How might alternative land use futures affect groundwater quality?
- Ongoing and planned work related to nitrate in groundwater in the UK under LTLS-FE
  - Nitrate travel times in groundwater (to feed into LTLS-FE IM)
  - Where is nitrate attenuated in groundwater?
  - Other work

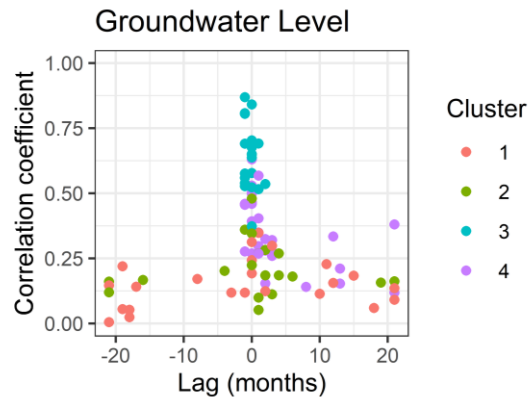

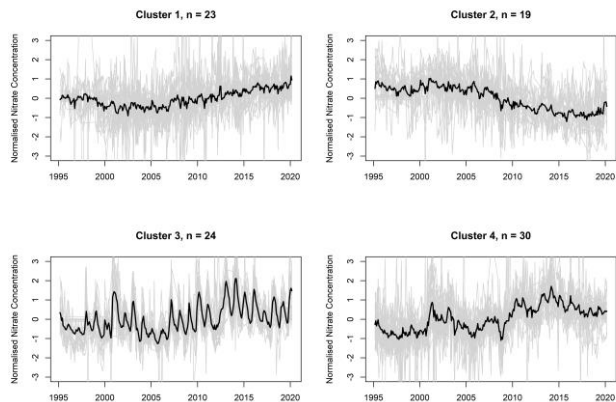

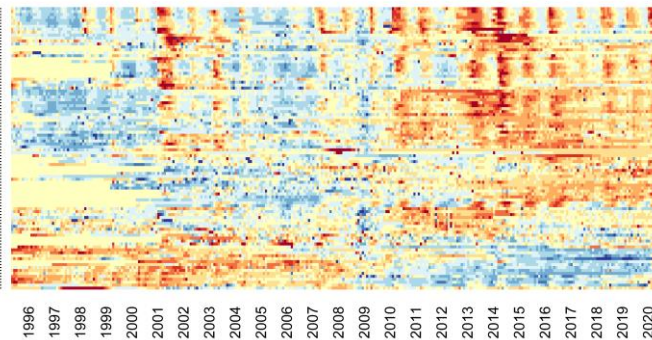

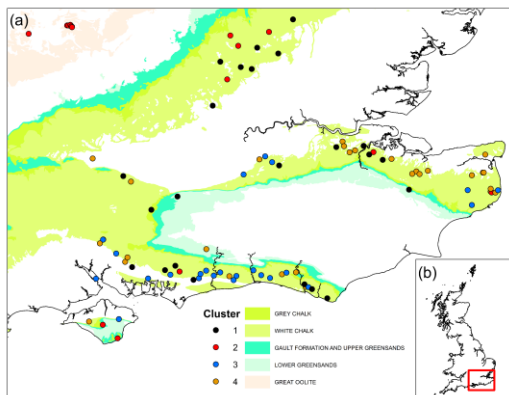

# Background

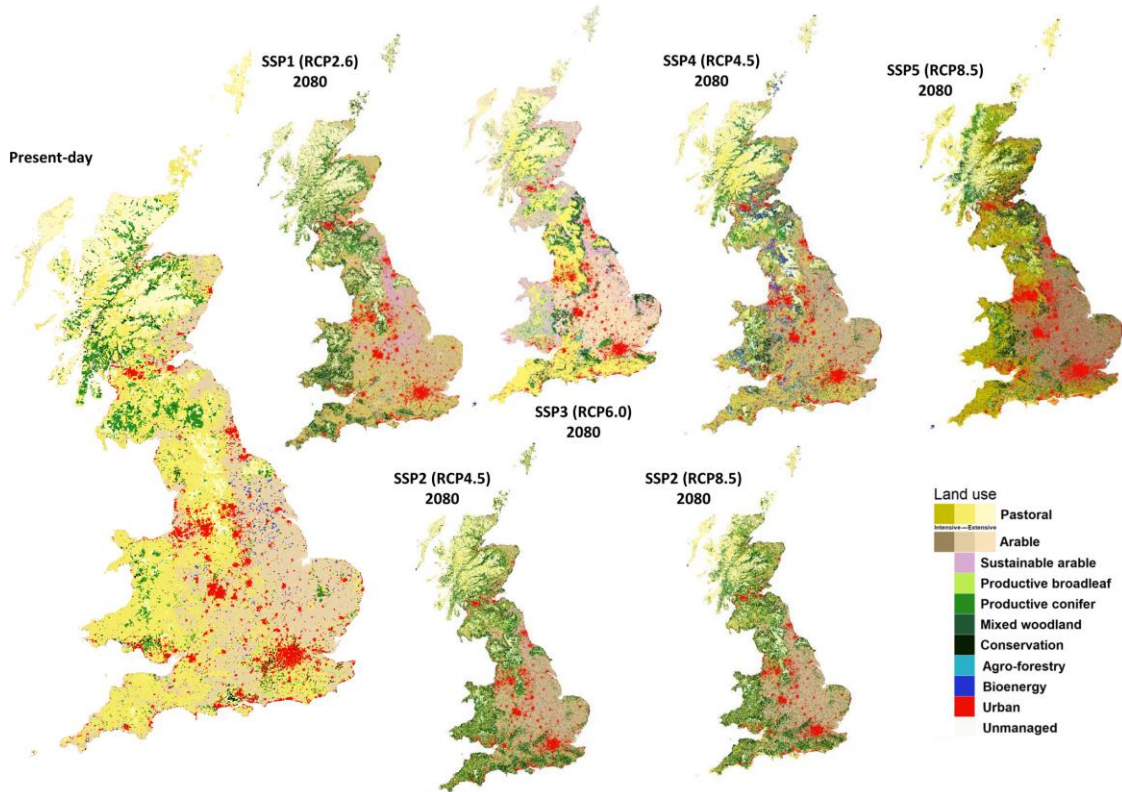

# Background

# Recent nitrate work – nitrate and climate variability

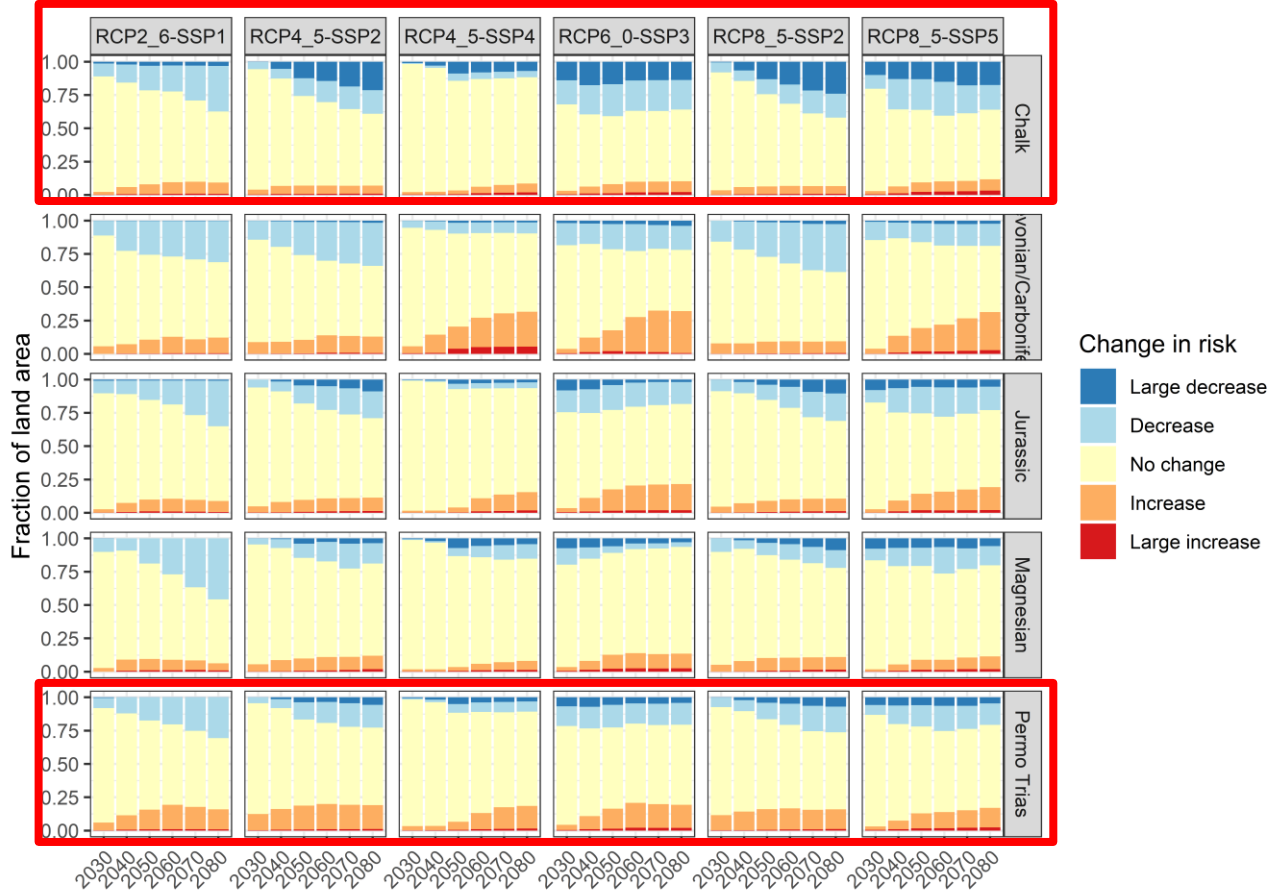

# Recent nitrate work – Land use futures

Land Use Class	Agricultural N load (mg/L)	Nitrate
Mixed Woodland	-	1
Native Woodland for Conservation	-	1
Productive Native Broadleaf	-	1
Productive Native Conifer	-	1
Productive Non-Native Broadleaf	-	1
Productive Non-Native Conifer	-	1
Very Extensive Pasture	1.52	1
Extensive Pasture	1.81	1
Agroforestry	-	2
Extensive Arable	4.15	2
Intensive Pasture	5.72	2
Sustainable Arable	-	2
Bioenergy	-	3
Intensive Arable (Fodder)	12.62	3
Intensive Arable (Food)	12.62	3
Urban	-	3

# Agricultural Contaminants

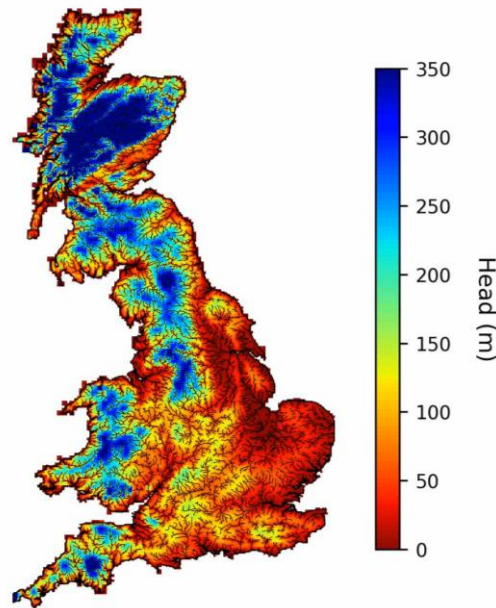

# Groundwater nitrate work in LTLS-FE – Travel times from BGWM

Pathlines in the Great London Area

1/1970

Simulated groundwater heads

Particle tracking (MODPATH) applied to the BGWM to calculate travel times (TT) of the groundwater contribution to streamflow:

- TT distributions in catchments
- Maps of advective GW velocity

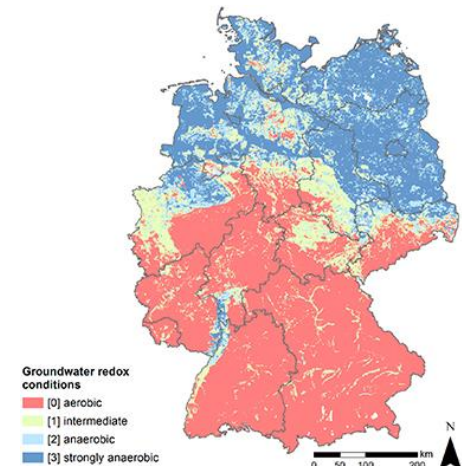

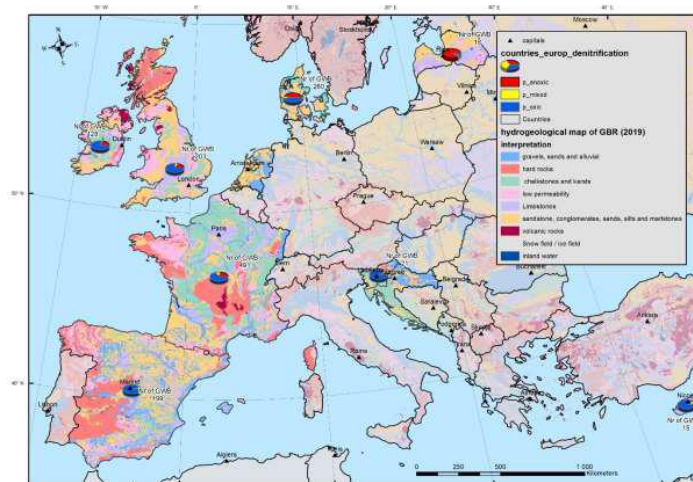

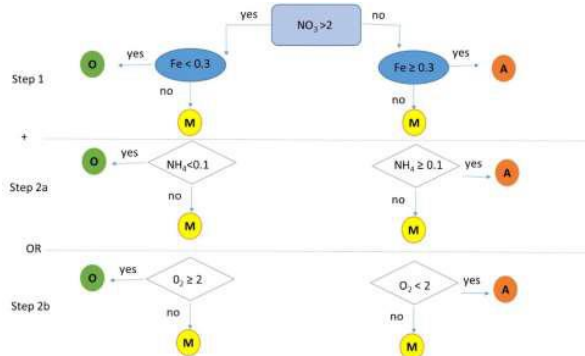

Example: Kaandorp et al. (2021)

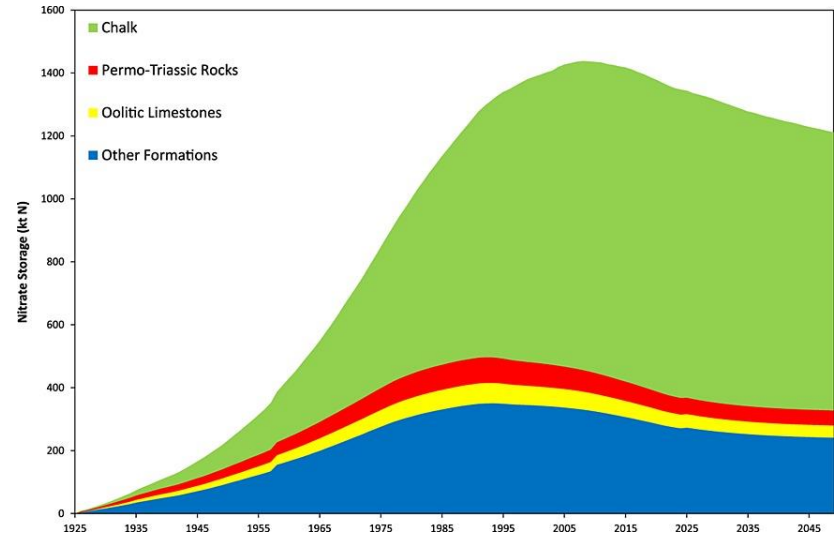

# Groundwater nitrate work in LTLS-FE – Nitrate and redox mapping

- Understanding where nitrate may not be conservative in groundwater
- EA WIMS data for groundwater
- Geostatistical and ML techniques

# Groundwater nitrate work in LTLS-FE

- Further time series analysis
  - Changes in seasonality
  - Spatio-temporal statistical modelling of nitrate in groundwater and relationships to surface water nitrate
- Quantitative estimates of impacts of SPEED land use futures on nitrate in groundwater
  - RLM, BGS NTB and BGWM
  - Full subsurface nitrogen balance (including SGD?)
