Lake Hydromorphology and the WFD

1. Lake typology includes area and depth.
2. Quality element for ecological status.
3. Morphology and hydrologic condition are supporting elements for ecology.
4. Required for developing risk assessments for eutrophication and abstraction pressures.
5. Influence effectiveness of POM's and the timescale of 'recovery'.

Landscape Limnology

Landscape limnology is the spatially-explicit study of lakes, streams, and wetlands as they interact with freshwater, terrestrial, and human landscapes to determine the effects of pattern on ecosystem processes.

Landscape Limnology Conceptual Diagram

Hydromorphology Metrics- Morphology

1. Morphology (bathymetry)

- a. Lake depth surveys for ~ 500 lakes
- b. Standard protocol with geoprocessing in ArcGIS

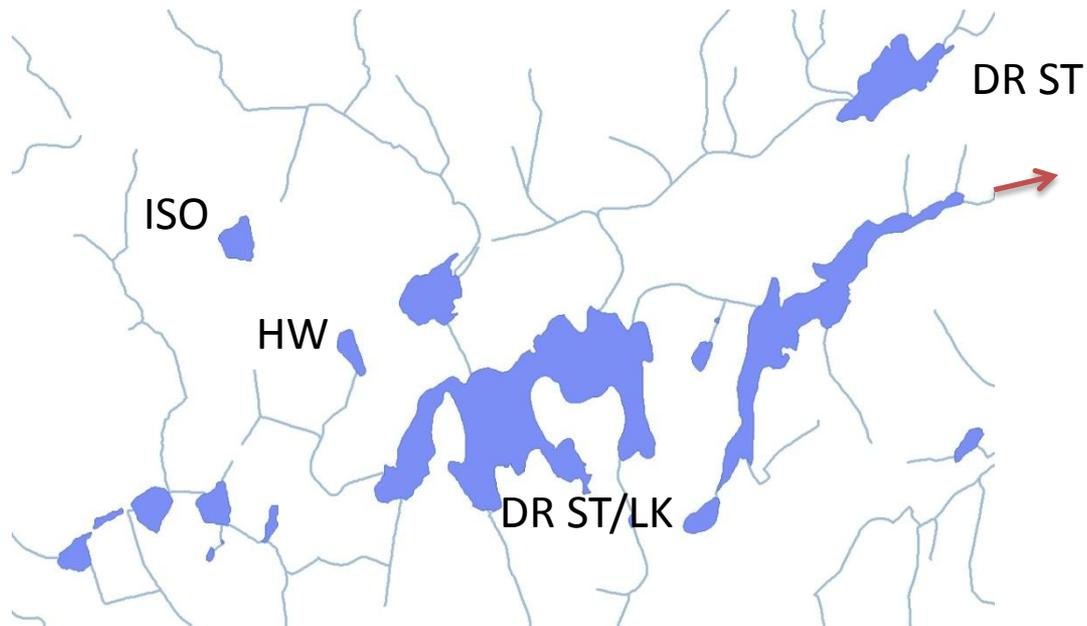

Volume & mean depth
Area/volume x depth
Basin shape and slope
Perimeter, shoreline complexity
Water residence time

Hydromorphology Metrics – Connections

2. Hydrologic Connections

- a. Position in the flow system and lake order
 - 1) Isolated (no inlets/outlet)
 - 2) Headwater (no inlets/outlet)
 - 3) Drainage ST (inlets/outlets, no upstream lakes)
 - 4) Drainage ST/LK (inlets/outlets, upstream lakes)

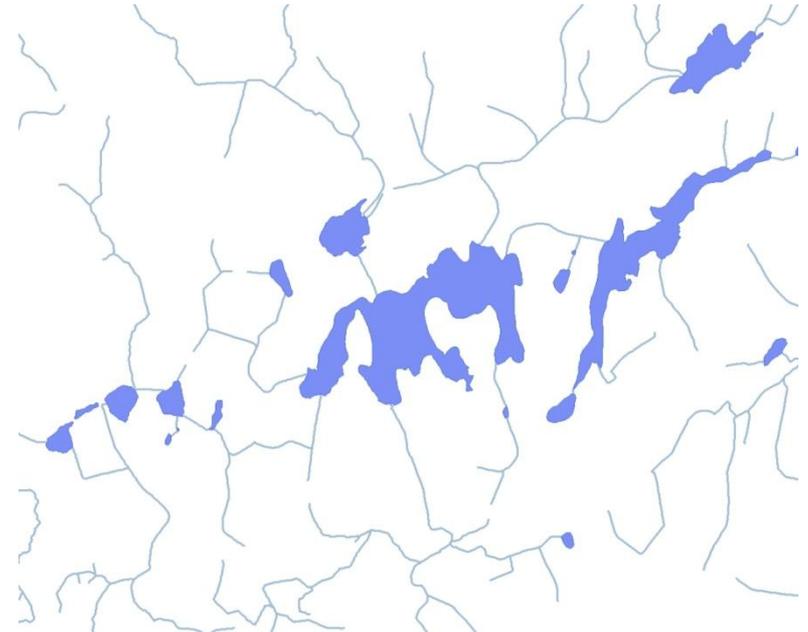

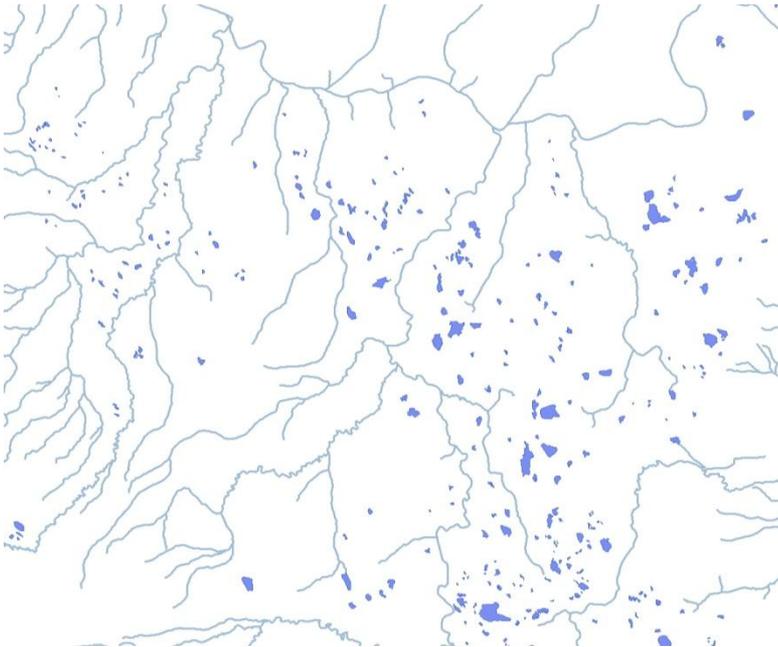

Hydromorphology Metrics – Connections

2. Hydrologic Connections

b. Aquatic connectivity

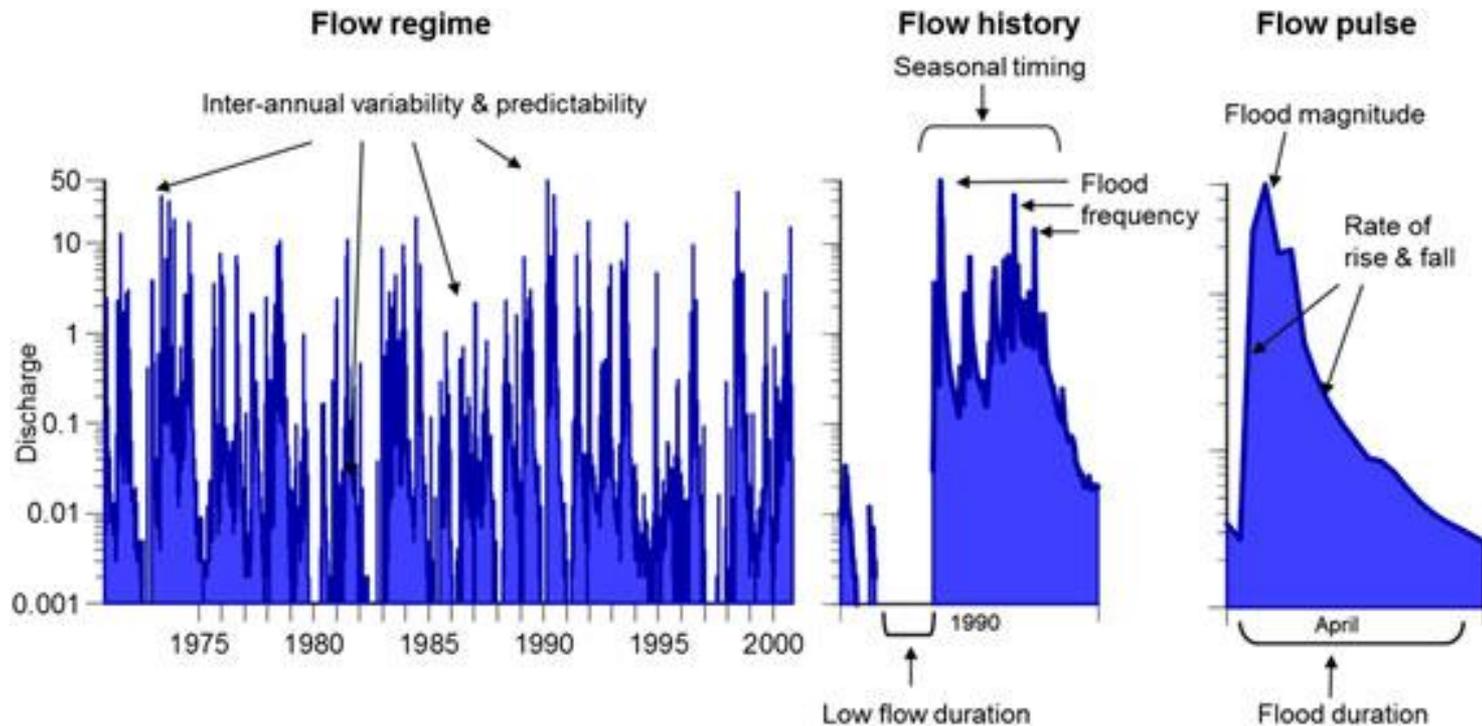

- 1) Stream network density & density of upstream lakes
- 2) Soil permeability / groundwater connectivity

Hydromorphology Metrics: Hydro Regime

3. Hydrologic Regime (*in progress!!*)

- Precipitation (monthly grids)
- River flow (daily flow for ~ 100 sites)
- Lake outflow (daily flow for ~30 sites)
- Lake level (daily for ~ 40 sites)

Characterisation of Hydromorphology

1. Landscape limnology conceptual framework
2. Hydromorphology metrics
3. Relationships between hydromorphology and lake water quality.

Study Lakes

186 WFD monitoring lakes

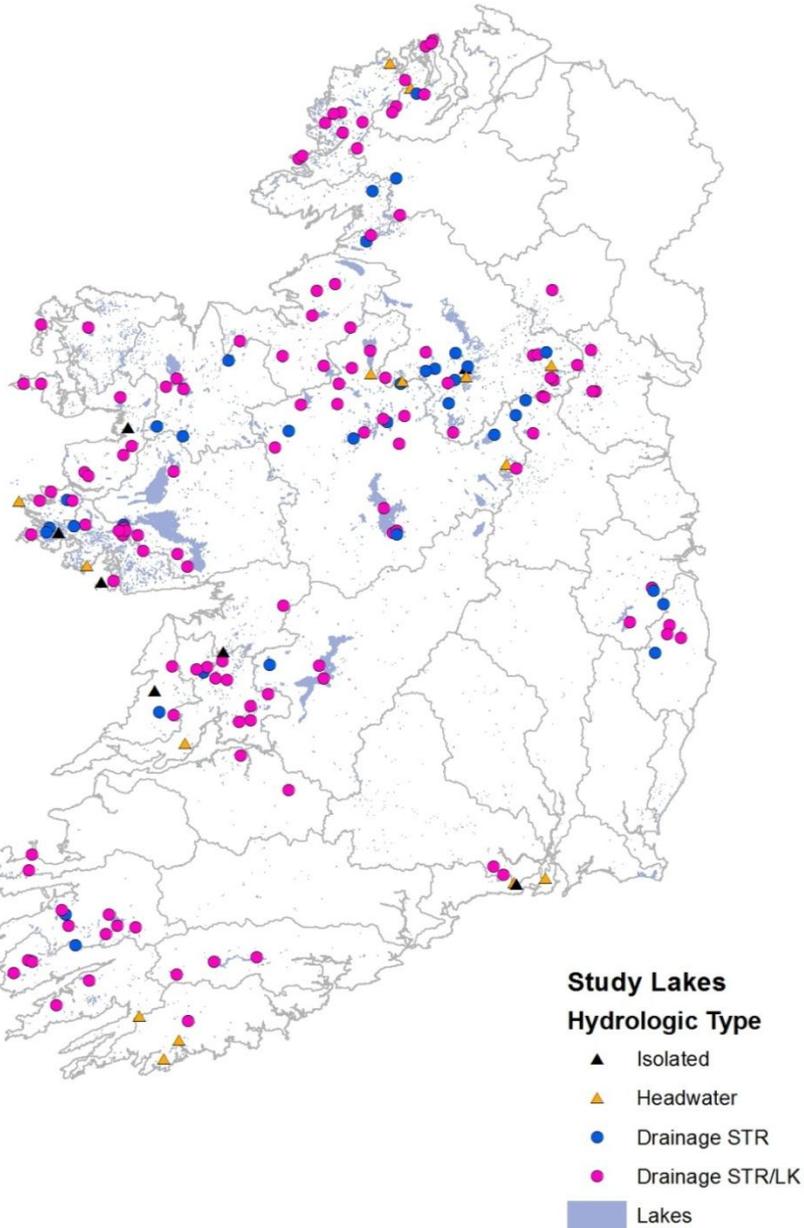

Wide range of characteristics

- WRT: 0.35 (0.002 – 9.1) yrs
- LK Area: 647 (22-116505) ha
- Hydrologic type
 - 8 Isolated
 - 16 Headwater
 - 36 Drainage STR
 - 126 Drainage STR/LK

Study Lakes Water Quality

Median values from 4-5 years of summer and spring values

	Median	Range
Alkalinity	37	1.7 - 282
Total P	13	4 - 143
Chlorophyll	4.7	0.4 – 43
Colour	43	6 - 167

Lake Landscape Predictors

GOAL: Identify hydromorphology metrics that best explain variance in lake water quality.

Hydromorphology

Lake area, mean depth, order, water residence time

Catchment area, slope, stream density, lake density; CA:LK area ratio

Soil permeability (~Groundwater?)

Runoff

Lake Landscape Predictors

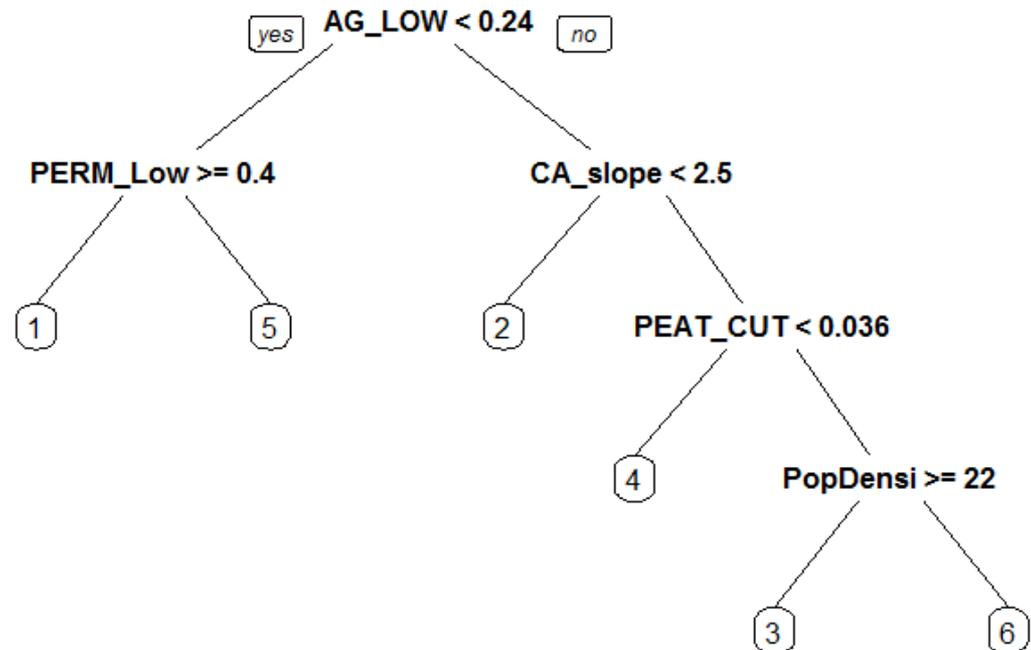

GOAL: Compare hydromorphology to geomorphology and anthropogenic features.

Hydromorphology	Geomorphology	Anthropogenic
Lake area, mean depth, order, water residence time	Catchment elevation	Population density, Drinking water supply
Catchment area, slope, stream density, lake density; CA:LK area ratio	Land cover: mixed/broadleaf forest, grassland	Land use: low-intensity AG, high-intensity AG, coniferous (managed) forest
Soil permeability	Soils: alluvium, sand+gravel, blanket peat, fen+raised bog, till, exposed bedrock	Soils: cut peat
Runoff	Bedrock: basalt, igneous, sedimentary, limestone	Presence of zebra mussels

Exploratory Data Analysis

randomForest package in R

- Constructs 500 regression trees via bootstrapped samples of the response data and the predictors
- ‘Importance’ values for each predictor based on how often it is included in the 500 trees and tree position.
- % variance explained

Random Forest Results – %Variance

WQ Variable	Hydro-morph	Geo-morph	Anthro-pogenic	<i>All</i>
Alkalinity	58.5	76.8	53.9	82.3
Total P	32.9	42.6	36.4	42.4
Chlorophyll	31.2	47.2	25.1	47.4
Colour	36.9	32.6	10.6	38.5

Conclusions

1. Runoff, soil permeability, stream density and catchment slope were most important hydromorphology metrics.
2. Hydromorphology metrics were secondary in importance compared to geomorphology for alkalinity, TP, and chlorophyll....
3. But, were more important for colour and CHL:TP.
4. Lake-specific features – water residence time, landscape position – not important.
5. Need to consider lake-specific features nested within landscape units.
