UK Pollinator Monitoring Scheme

A new network of 75 1km squares for long-term monitoring of pollinator populations across England, Scotland and Wales. Bringing together volunteer and professional recorders to underpin national pollinator strategies and increase the evidence base for understanding status and trends.

Join us to take part in 4 surveys per year at a square near you!

• Pan traps left for 6 hours
• Flower counts at each trap
• Flower-Insect Timed Counts (FIT-Count) with ID to insect group level

To volunteer please contact poms@ceh.ac.uk

Can you spare 10 minutes?
Try some FIT Counts in your garden or park and submit to iRecord online. Full details available from the PoMS website
