

Comparing the soil horizons of each block

The recorded values for the five **FH horizons** are given in the table below

Block	Horizon	Wt (mg)	%N	%C	C:N	Ca	K	Mg	%ML	%LOI	pH (H ₂ O)	pH (CaCl ₂)
1	FH	6.091	2.14	39.97	18.64	9.84	5.13	6.84	8.79	77.88	4.67	4.38
2	FH	5.914	1.85	32.81	17.72	8.36	3.29	3.93	8.03	62.81	4.38	3.74
3	FH	5.4	2.11	39.38	18.71	6.24	3.76	4.3	8.75	76.36	4.42	3.92
4	FH	5.827	1.88	38.12	20.24	10.05	3.41	4.48	8.94	73.26	4.76	4.01
5	FH	6.218	2.05	33.81	16.46	11.91	3.3	5.92	8.16	67	4.66	4.48

The data suggest that there are detectable differences in levels of Ca, K and Mg in the FH layer of the soil, with the highest levels of Ca in blocks 4 and 5, and the highest levels of K and Mg in block 1.

The recorded values of the variables for the five **H horizons** are given in the table below

Block	Horizon	Wt (mg)	%N	%C	C:N	Ca	K	Mg	%ML	%LOI	pH (H ₂ O)	pH (CaCl ₂)
1	H	5.809	2.35	34.92	14.87	6.16	2.96	4.24	8.78	67.32	4.55	3.74
2	H	5.109	1.31	17.93	13.72	5.84	1.14	2.62	7.61	37.76	4.71	3.98
3	H	5.558	2.15	31.82	14.84	4.13	2.78	3.08	9.87	62.5	4.99	4.05
4	H	5.869	2.14	32.25	15.1	7.08	2.73	3.35	10.09	63.99	4.94	4.19
5	H	5.717	2.17	31.06	14.31	12.54	1.5	5.5	9.43	59.64	5.2	4.41

Again, the highest level of Ca in the H horizon occurs in the soil pit for block 5. In contrast, the H horizon in the soil pit for block 2 has noticeably lower values of %N, %C, K, Mg, %Moisture loss and %LOI than the same horizon in the soil pits for the other blocks.

The recorded values of the variables for the **A, B and C horizons** in the soil pits are given I the following tables

Block	Horizon	Wt (mg)	%N	%C	C:N	Ca	K	Mg	%ML	%LOI	pH (H ₂ O)	pH (CaCl ₂)
1	Ap	5.594	0.34	4.43	12.88	0.36	0.31	0.28	4.9	11.83	4.63	3.66
